SUMMARY

Full-stack Software Engineer with hands-on production experience shipping React + TypeScript applications end-to-end. Built and deployed NexTask — an AI-powered project management SaaS featuring real-time collaboration, a git-style visual project map, an LLM-driven task assistant, Supabase backend, and a Three.js landing page. M.S. Computer Science, UMBC (GPA: 3.79, May 2026). Strong foundation in component architecture, REST API design, and cloud deployment. Available immediately — strongest in React + TypeScript frontend with full-stack ownership across the API and deployment layer.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, Framer Motion, Three.js, React Three Fiber, dnd-kit, Vite

Backend: Node.js, Django, Django REST Framework, FastAPI, RESTful APIs, Supabase, Microservices

Databases & Auth: PostgreSQL, MySQL, MongoDB, Supabase Auth, Google OAuth 2.0 (PKCE), Row Level Security

DevOps & Tools: Docker, AWS (EC2, S3), Vercel, CI/CD, GitHub Actions, GitLab, Git, Agile / Scrum

EXPERIENCE

Software Developer — American Technology Initiative Inc.

Mar 2026 – May 2026 | Remote

React · TypeScript · Django REST Framework · PostgreSQL · Docker · GitLab CI/CD

- Owned end-to-end feature delivery on a containerized volunteer management platform (React + Django + PostgreSQL) built the frontend component architecture, REST API layer, and Docker deployment infrastructure from the ground up.
- Designed and optimized RESTful APIs with Django REST Framework, improving real-time data access and reporting performance across multiple user roles; enforced consistent API contracts through code review and documentation.
- Reduced developer onboarding friction by architecting modular Docker-based environments with parity between local and production builds; established GitLab CI/CD pipelines that automated linting, testing, and deployment.
- Debugged and resolved production issues across the full stack in a distributed, cross-functional team — improving application stability and maintaining a clean issue backlog throughout the engagement.

Graduate Teaching Assistant — University of Maryland, Baltimore County

Aug 2025 – Jan 2026

Malware Analysis · Linux · GDB · Reverse Engineering · Secure Coding

- Mentored 40+ graduate students through malware analysis, system-level debugging with GDB, and reverse-engineering workflows on Linux — contributing to measurably higher lab completion rates semester-over-semester.
- Standardized lab environment setup steps after diagnosing recurring toolchain issues across student machines, significantly reducing setup failures and support requests from the cohort.
- Graded assignments using a secure-coding rubric with detailed written feedback; students demonstrated a measurable reduction in security vulnerabilities in subsequent project submissions.

Web Development Intern — Codsoft

May 2023 – Jul 2023 | Remote

HTML · CSS · Bootstrap · Django · Node.js · Git

- Developed responsive, cross-browser UI components with HTML, CSS, Bootstrap, and Django; improved page-load performance and device compatibility through lazy loading and optimized asset delivery.
- Built reusable front-end components in Node.js from product requirements, reducing duplication across the codebase and ensuring consistent UI behavior across the full application.

PROJECTS

NexTask — AI-Powered Project & Task Management SaaS | [GitHub](#) | [Live](#)

Jan – May 2026

React 18 · TypeScript · Tailwind CSS · Supabase (PostgreSQL + Realtime + RLS) · Anthropic API · Three.js · React Three Fiber · dnd-kit · Framer Motion · Vercel

- Designed and shipped a full-stack SaaS task management platform from scratch: real-time collaborative Kanban boards with drag-and-drop (dnd-kit), optimistic UI updates, and a 4-stage workflow — giving interactions a near-instant feel regardless of network conditions.
- Built Flow, a git-style visual project map for async and standup contexts: managers drill into any feature branch to see its live Kanban board, individual task statuses, and contributor activity — replacing the need for manual status updates in meetings.
- Developed Nex, an AI assistant (Anthropic API) that creates and dismisses tasks via natural language, auto-generates descriptions and subtasks from a task title, and delivers a contextual summary of project-wide activity — reducing manual overhead for team leads and PMs.

- Enforced multi-tenant data isolation with PostgreSQL Row Level Security at the database layer; implemented Google OAuth (PKCE) and email/password auth via Supabase Auth; synced real-time board state across workspace collaborators using Supabase Realtime channels.
- Engineered a Three.js / React Three Fiber landing page with a 3D animated hero, Lenis smooth scroll, scroll-driven 3D product mockup, and a live embedded demo board — fully showcasing the product without requiring sign-up.

Pulsar Star Detection — Cloud ML Microservice Platform | [GitHub](#)

Aug – Dec 2025

Python · FastAPI · LightGBM · Streamlit · Docker · PostgreSQL · Redis · AWS EC2 · GitHub Actions · SMOTE · Optuna · SHAP

- Architected a production-grade ML inference service on AWS EC2: independent Docker microservices for data ingestion, preprocessing, model inference, and results storage — achieving 99% accuracy and ROC-AUC of 0.973 on the HTRU2 pulsar dataset using LightGBM.
- Applied SMOTE to address class imbalance, Optuna for automated hyperparameter tuning, and SHAP for prediction explainability; Redis caches inference results for repeat queries; PostgreSQL persists full prediction history.
- Shipped a Streamlit dashboard with single-sample and batch prediction modes, EDA visualizations, and SHAP waterfall charts; deployed end-to-end with a CI-ready GitHub Actions pipeline for automated testing and zero-downtime deployments.

Quantum SVM — Network Intrusion Anomaly Detection | [GitHub](#) | [Live](#)

Apr 2026

Python · Qiskit · ZZFeatureMap · FidelityQuantumKernel · Scikit-learn · Streamlit · React 18 · TypeScript · Three.js · Vercel

- Implemented a Quantum SVM (Qiskit ZZFeatureMap + FidelityQuantumKernel) to classify network intrusions on KDD Cup 99; benchmarked against a classical RBF-SVM baseline across accuracy, precision, recall, F1, and ROC-AUC — quantifying the practical gap between quantum and classical kernels.
- Built a four-stage Python pipeline (preprocessing, quantum feature mapping, training, evaluation) with precomputed results for instant dashboard load; dark-themed Streamlit UI surfaces side-by-side model comparison charts and per-class confusion matrices.
- Delivered a React 18 + TypeScript + Three.js landing page for the project — consistent with NexTask's stack — with 3D animated visuals, Framer Motion transitions, and Lenis smooth scroll; deployed on Vercel.

Cross-Lingual Sentiment Analysis — Transformer Benchmarking

Feb – May 2025

Python · PyTorch · HuggingFace Transformers · mBERT · XLM-R · XLNet · Scikit-learn

- Engineered multilingual emotion-classification pipelines using mBERT, XLM-R, and XLNet; conducted zero-shot vs. fine-tuned model comparisons across GoEmotions, Amazon Reviews, and MasakhaNER datasets — evaluating cross-lingual generalization at scale.
- Designed reproducible benchmarking experiments tracked on Accuracy, F1, and BLEU; improved robustness through optimized tokenization strategies and systematic hyperparameter tuning across all three model architectures.

Chest X-Ray Classifier — COVID-19 / Pneumonia / Normal

Sep 2024 – Jan 2025

Python · TensorFlow · Keras · OpenCV

- Trained CNN models to classify chest X-rays across three categories, achieving AUC scores of 0.99, 0.98, and 0.97 on a held-out test set; applied data augmentation and GPU-accelerated training to address class imbalance in medical imaging data.
- Implemented dropout regularization and learning rate scheduling to reduce overfitting; conducted EDA to validate dataset quality and class distribution prior to all training runs.

EDUCATION

University of Maryland, Baltimore County

Aug 2024 – May 2026

M.S. Computer Science · GPA: 3.79

Relevant Coursework: Natural Language Processing, Machine Learning, Data Science, Design and Analysis of Algorithms, Malware Analysis, Service-Oriented Computing, Quantum Computing

B V Raju Institute of Technology

Sep 2020 – Jun 2024

B.Tech Computer Science · GPA: 3.37

CERTIFICATIONS

AWS Cloud Virtual Internship (AWS Academy) · Robotic Process Automation (Blue Prism University) · Web Development (Udemy) · Problem Solving & Java (HackerRank)
